SUMMARY

Data Analyst with 3+ years of experience delivering SQL and Power BI-driven insights across finance, customer operations, and commercial teams. Proven at automating reporting, improving data accuracy, and translating complex data into clear, actionable recommendations for non-technical stakeholders. MSc Data Science (Distinction), with strong foundations in data modelling, Python analytics, and dashboard development.

TECHNICAL SKILLS & CERTIFICATIONS

Programming & Databases: Python, SQL, MySQL, R

Business Intelligence & Visualisation: Power BI (DAX, Data Modelling, Power Query), Tableau, Advanced Excel

Data Modelling & ETL: Data Cleaning & Validation, ETL pipelines, API Integration, Automated Reporting

Machine Learning & Analytics: Predictive Modelling, Time Series Forecasting, NLP

Frameworks/Libraries: Scikit-learn, TensorFlow, PyTorch, Hugging Face

Professional Skills: Agile/Scrum, Stakeholder Communication, Requirements Gathering, Documentation

Certifications: British Airways – Data Science Simulation (Forage), Tata Group – Data Visualisation Simulation (Forage)

WORK EXPERIENCE

Data Scientist (AI Innovation Project) | Omdena | Oct 2025 – Dec 2025 | UK, Remote

- Delivered a deterministic **log normalisation and classification framework** for large-scale observability data, improving log consistency and analytics usability.
- Designed a **standardised JSON schema and controlled vocabulary**, reducing schema ambiguity and enabling reliable downstream reporting and analysis.
- Built Python-based data validation and transformation pipelines to structure, anonymise, and prepare PII-safe logs for analytics and ML workflows.
- Generated **synthetic log datasets** to enable scalable testing and data quality validation, and collaborated with a globally distributed, cross-functional team to deliver an end-to-end data solution.

Senior Systems Engineer | Infosys Ltd | Sep 2021 – Sep 2024 | Chennai, India

- Automated weekly executive KPI packs using **Python + Power BI**, reducing reporting time from **10 hrs to 2 hrs/week** and improving accuracy by **30%**.
- Built data pipelines using Python + SQL to extract and transform large retail datasets (churn, sales, repeat purchases), enabling **data-driven decisions for 20+ regional managers**.
- Developed ETL workflows that improved operational performance by **15%** through streamlined data preparation and cleansing.
- Designed Power BI/Tableau dashboards that revealed customer trends, churn behaviour and category performance.
- Mentored junior analysts on Python, SQL, and BI, **accelerating onboarding and capability development** within the analytics team.

SELECTED PROJECTS

Mental Health Signal Detection (NLP • Transformers) | *Python, PyTorch, Hugging Face*

- Fine-tuned DistilBERT on 18K+ Reddit posts to classify mental-health risk levels (Low/Medium/High).
- Improved model performance using cross-validation, achieving macro-F1 improvement of 19% vs baseline logistic regression.

Weather-Crime Trend Analysis (BI & Data Visualisation) | *R, ggplot2, Plotly, Leaflet*

- Analysed 16K+ crime + weather records, identifying crime hotspots and seasonal trends.
- Built interactive dashboards enabling correlation exploration for policy insights.

Stock Market Return Prediction (ML · Finance) | *Python, Scikit-learn, TensorFlow*

- Engineered technical indicators and evaluated ML models for stock return prediction.
- Selected Linear Regression/SVM based on lowest MSE to support data-driven investment insights.

EDUCATION

MSc Data Science (Distinction) | University of Essex, Colchester, UK | Oct 2024 – Sept 2025

Bachelor of Technology, Pharmaceutical Tech | Anna University (A.C. Tech), Chennai, India | Aug 2017 – Apr 2021
